SELLING METHOD FOR COMPETITIVE SPORT RELATED **RIGHTS** , SELLING SYSTEM FOR
COMPETITIVE SPORT RELATED **RIGHTS** , ITS SERVER SYSTEM AND TERMINAL

PUB. NO.: 2002-074030 [JP 2002074030 A]
PUBLISHED: March 12, 2002 (20020312)
INVENTOR(s): **GOINO TADASHI**
APPLICANT(s): GOINO TADASHI
APPL. NO.: 2000-267406 [JP 2000267406]
FILED: September 04, 2000 (20000904)

SELLING METHOD FOR COMPETITIVE SPORT RELATED **RIGHTS** , SELLING SYSTEM FOR
COMPETITIVE SPORT RELATED **RIGHTS** , ITS SERVER SYSTEM AND TERMINAL

INVENTOR(s): **GOINO TADASHI**

ABSTRACT

PROBLEM TO BE SOLVED: To provide a competitive sport related **right**
selling method which is conducted over a network in which an athlete can
easily obtain...

...on a terminal 30 via the Internet N by a server 21. Data on the **rights**
(advertising **right** , copyright) generating attendant on an athlete (a
sumo wrestler) 4, data on an athlete 5, and data calculating **right** price
are stored in a database 23. The sever 21 calculates **rights** -selling price
by using elements becoming an index for advertising effect such as
rankings, winning record, popularity, actual power, and talent and the like
as parameters, and invites a **right** purchaser in a terminal 30 of a third
party through the Internet N. Information forming...

... effect of the athlete 5 is displayed on the screen of the terminal 30.
Advertising **rights** attaching advertising display 8 to underpants 5 or a
flag 6 and the like of the athlete 5 is contained in the selling **rights** .

Although the ideal for copyright control would be information packaged to allow easy distribution over an enterprise or an Internet-based value chain while keeping packaged contents secure, managers **currently** have to balance the need for information availability with assignment of access rights and protection of content from prying eyes. Therefore, they are seeking and **buying** digital **rights** management (DRM) **products** that have the same features previously only used to protect military intelligence and industrial secrets. DRM products are made up of technologies and methods that protect digital materials and restrict access to solely those who have the needed authorization. Digital content is encrypted and packaged with a key that allows the information package to be opened and its contents to become accessible. The key is matched to a license that is at first separate from the package and capable of defining a set of rights that determine how the content can be used when the license is granted. Protected content can be distributed to users and possible customers via various means, including downloading from a Web site, streamed from a server, e-mailed, or copied from a CD. Among topics covered are commercial solutions from Adobe and Microsoft; DRM license management models; built-in and plugged-in DRM choices; and the need for a standardized DRM language.

RECORD TYPE: Review

REVIEW TYPE: Company

eBay, the online auction house, recently acquired physical auctioneers Butterfield & Butterfield (B&B), for a sum that is slightly higher than 1 percent of eBay's **current** market value. Most of eBay's 1.8 million,

daily, person-to-person **auctions** transfer **merchandise** that would be **right** at home in a middle-American garage sale, but B&B is a respected auction house dating from 1865, which specializes in goods that sell between hundreds and millions of dollars. B&B had recently filed for an IPO, but eBay needed to use some of its paper wealth, and decided to acquire a physical auctioneer in a move not unlike that of many other Internet companies with highly valued stocks. Because the 'brick and mortar' world has an advantage over a strictly Net-based operation, eBay gains a brand reputation, an existing customer base, and a tactile environment that are an attractive alternative to strictly virtual auction houses. Similar operations include Gateway's retail stores, which cater to those who will not purchase a computer without seeing it, and Reel.com, which was purchased by Hollywood Video, a large video rental chain. Reel.com sends rental customers to physical stores, and Hollywood Video promotes Reel.com's online specials and offers customers coupons for free DVD values.

PRODUCT NAMES: Microsoft Windows 95 (551473)

TITLE: Practitioners advise: Look before you leap to Windows 95

AUTHOR: Scott, Robert W

SOURCE: Accounting Today, v9 n14 p20(2) Aug 7, 1995

ISSN: 1044-5714

HOME PAGE: <http://www.electronicaccountant.com>

RECORD TYPE: Review

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

Windows 95 has many benefits for accountants, who should evaluate upgrade costs, NetWare connectivity, and compatibility with installed DOS and tax applications before fully adopting the system. Hardware upgrade costs to network each machine will run about \$600, says an accountant interviewed. Several accountants prefer to let others **immediately** purchase, install, and debug the system, since few accounting products, including CCH's Pro System fx, have been tested on the system. However, one accountant who usually takes a wait-and-see position plans quick implementation, because Windows 95 provides stability, better performance, plug and play configuration, and the Microsoft Network. An accounting **product** reseller urges computer consultants to **buy right** away, but says other accounting firms can wait for Microsoft Windows' extended addressable memory, long filenames, peer-to-peer networking, Universal Mail Box, 32-bit processing, and preemptive multitasking.

GRADE: Product Analysis, No Rating

Total Control Products (TCP) has **acquired** the **rights** to market P-CIM, a supervisory control and data acquisition (SCADA) package originally developed by Afcon Control and Automation. P-CIM offers good user-friendliness, and combines with TCP's hardware to provide a very complete operator interface package. Together with TCP's industrially hardened computers, P-CIM provides a packaged, Level III solution. A level I solution covers 38 addresses, Level II covers 160, and Level III offers unlimited access. The driver runs under DOS, in order to achieve a higher priority on data gathering than is available under Windows. The package also allows tag names to be unassigned **during** development, and data can be read in from other software.

AN ANALYSIS OF RESTRICTED SHARES IN CANADA, 1970-1984

Author: MAYNES, ELIZABETH MARIE

Degree: PH.D.

Year: 1989

Corporate Source/Institution: QUEEN'S UNIVERSITY AT KINGSTON (CANADA) (0283)

Source: VOLUME 50/02-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 506.

Descriptors: ECONOMICS, FINANCE

Descriptor Codes: 0508

This thesis analyzes the creation and regulation of a lesser known class of equity variously called restricted shares or inferior voting shares. Although restricted shares are fully participating in the firm's residual cash flow, their distinguishing feature is they are not fully franchised, with no or fewer votes per share relative to a "superior" voting participating class. Restricted shares have potentially serious ramifications for corporate control as ownership of votes is separated from the ownership of income claims and have recently been the focus of regulatory concern.

Part I of the thesis examines the effect on shareholders' wealth of the creation of restricted shares. Restricted shares may be used by large shareholders, who enjoy private benefits from control, preventing value-increasing takeover bids. Additionally, the issuance of restricted shares may be associated with a reduction in monitoring by the major shareholder, which is also value decreasing. An **event** study examining a group of 43 stocks listed on the Toronto Stock Exchange finds that the reorganizations are not wealth increasing for shareholders and may in fact be wealth decreasing.

Since 1980, two highly-charged policy debates on the appropriate regulation of restricted shares have been held. Part II considers the effects on prices of superior and inferior voting shares of the deliberations of the Ontario Securities Commission (OSC) between 1980 to 1982. During this period a proposal to delist inferior voting shares was considered. Although the shares were never delisted, the threat to delist the inferior voting shares reduced their price relative to their corresponding superior voting shares.

Part III of the thesis examines the impact of the extension of **right** to participate in takeover **bids** ("coattails") to inferior voting shares. A model of the relative price of superior and inferior voting shares based on unequal treatment in takeovers is presented. The model predicts that the extension of coattails to inferior voting shares will increase the relative value of inferior voting shares and decrease the overall value of the firm. Using the **event** study methodology, the impact of an interim OSC policy requiring coattails to inferior voting shares is **estimated** by measuring stock **price** responses to the announcement. The findings of the analysis do not support the hypothesis, suggesting that coattails are not valuable or that the OSC's eventual policy reversal was anticipated.

Repeated auctions, the right of first refusal, and the National Park Service

Author: Chouinard, Hayley Helene
Degree: Ph.D.
Year: 2002
Corporate Source/Institution: University of California, Berkeley (0028)
Chairs: Jeffrey M. Perloff; Michael B. Ward
Source: VOLUME 63/09-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 3281. 87 PAGES
Descriptors: ECONOMICS, AGRICULTURAL
Descriptor Codes: 0503
ISBN: 0-493-82186-4

Auction rules describe the auction and dictate the bidders and their optimal bids. A rule which may greatly influence the outcome of auctions is the right of first refusal. An incumbent, the winner of the auction in the previous period, with the right of first refusal has the **right** to **match** the highest **current bid**. An incumbent with this **right** can choose to match all other bids and continually win subsequent auctions.

The effects of including the right of first refusal in auctions is the focus of this work. The auctions modeled are used to examine the National Park Service concession contracts, as the Park Service uses both types of auctions. After an introductory chapter, Chapter 2 describes the National Park concession contracts. A history of the contracts is given followed by a description of the two types of current contracts.

To begin the analysis of the National Park concession contract auctions, one period **auction** models with and without the **right** of first refusal are **presented** in Chapter 3. The optimal bidding strategies, and expected payoff to the seller are compared. The payoff to the National Park Service will depend on the values held by the bidders. However, it is found that when the incumbent has a relatively high value for the concession right, the National Park Service will receive more service and/or payment with the auction without the right of first refusal.

A first price repeated auction with the right of first refusal and a second price repeated auction without the right are developed in Chapter 4. It is found that the auction without the right of first refusal will generate the same payoff for the National Park Service as the auction without the right of first refusal.

Chapter 5 contains an analysis of the robustness of the repeated auction with the right of first refusal examined previously. The limitation of two bidders, and the uniform cost distribution assumptions are relaxed. The results of these generalizations are then compared with the results of the original repeated auction with the right of first refusal. Conclusions are given in Chapter 6.

Empirical studies of auction and product differentiation in cellular phone markets

Author: Iimi, Atsushi
Degree: Ph.D.
Year: 2002
Corporate Source/Institution: Brown University (0024)
Adviser: Harumi Ito
Source: VOLUME 63/04-A OF DISSERTATION ABSTRACTS INTERNATIONAL.
PAGE 1455. 191 PAGES

Descriptors: ECONOMICS, GENERAL ; ECONOMICS, COMMERCE-BUSINESS
Descriptor Codes: 0501; 0505
ISBN: 0-493-65498-4

I empirically investigate three topics: reputation effect in auctions, technological innovation after deregulation, and competing costs in an auction. I use the data from the Japanese and U.S. cellular phone markets, which require small installation costs and are supposed to be contestable relative to ground-based telecommunication services.

First, I examine the impact of bidder's reputation on auctions by incorporating auction theory with Kreps and Wilson's (1982) reputation-based entry deterrence model. By treating the FCC spectrum rights auctions as sequential auctions, instead of simultaneous auctions, I find that in one earlier auction of 1997, an incumbent carrier seems to have taken advantage of the endogenous reputation effect, which distorts the auction's efficiency. I also find that in the later auctions, the FCC succeeds in controlling the appearance of the reputation effect by changing its auction designs.

Secondly, I address the post-deregulation performance of the Japanese cellular phone market by demand estimation with product differentiation. By using a discrete consumer choice model, the nested logit model, I find that the incumbent carrier could increase its market dominance by network externalities and providing new functional services successively. I also find that the incumbent uses the long-term contract discount to keep loyal consumers who look forward to innovative services. In contrast, the entrant carriers tend to rely on the marketing strategies such as family discount. Hence, despite market re-concentration, the incumbent's technological innovation so far benefits consumers.

Finally, I focus on the presence of competing costs in auctions, which conventional auction theory ignores. Following Krishna and Mogan (1997), I employ the war of attrition game to capture implicit competing costs in an open-bid ascending auction, the FCC spectrum rights auction. A semi-parametric estimation model, which incorporates the log-linear specification of bidders' valuations with the symmetric Bayesian Nash equilibrium bid function, shows that the competing cost is significantly positive and varies according to the FCC's auction design. I also show that the FCC auction belongs to the independent private value paradigm by partially linear nonparametric regression.

The purpose of this research study was to determine whether the Big Six Information Skills model was an effective metacognitive scaffold for students solving information-based problems. Prior research covering information problem solving models and scaffolding suggested that the use of a specific information problem solving model would provide additional support students needed in order to solve an information-based problem in

an effective and efficient manner.

Participants were 35 eighth grade students in a private middle school. Two classes of students each were asked to write newspaper articles that summarized the **events** surrounding the Selma March **during** the African-American Civil **Rights** Movement. Students **acquired** information from a multimedia CD-ROM that contained information in a variety of formats, including text, video, and audio. One class of students followed the procedures of the Big Six Information Skills while the other followed the procedures provided by the classroom teacher.

Students in both classes were given 11 class days to research and write their articles. During this time observations of classroom behavior were conducted. Student articles were scored by independent graders to ensure an objective assessment of the work. Students were asked to complete surveys after they completed their study activities. Interviews with the classroom teacher and a sample of participating students were conducted on the last day of the study. The interview responses were used to gain insight to the thoughts and feelings of the participating students and the classroom teacher.

Results of this study indicate that the Big Six Information Skills might prove to be an effective metacognitive scaffold for students solving information-based problems. Students following the Big Six methodology received higher scores on their newspaper articles. There were no significant differences found in the attitudes of the two classes of students. Overall, students in both classes felt that the unit project was a positive one and in the future they would like to do something similar to it covering different material.

Descriptor Codes: 0508

ISBN: 0-612-25996-X

This study uses daily prices and intraday trade and quote data to examine the market reaction to announcements of 95 rights offerings of Canadian firms listed on the TSE over the period 1987-1994. In a rights offering, existing shareholders are offered rights entitling them to buy new shares usually at a discount from the current market price. Consistent with previous research, we identify significant mean abnormal returns **during** the two-day **event** period (0, +1). Cross-sectional regression results support the information release, and possibly the price pressure hypotheses. Trading frequency, volume, value and conditional variance decrease significantly on the event day relative to the pre-event period and return to normal levels **during** the post- **event** period. The relative bid/ask spread decreases on the event day relative to the pre-event period. No significant permanent changes occur in all trade indicators from the pre- to post-event periods. Trade direction for the stocks does not change significantly between any two periods. Trades for the rights issued by the sample firms are more seller-initiated during their 21-day trade period.

**ESSAYS IN CORPORATE FINANCE: I. THE EFFECTS OF POISON PILLS ON
SHAREHOLDERS' WEALTH. II. FINANCIAL PERFORMANCE OF DIVERSIFIED FIRMS. III.
INTERVENTION ANALYSIS AND THE CUMULATIVE AVERAGE RESIDUAL METHOD**

Author: KIM, SUNGWO

Degree: D.B.A.

Year: 1991

Corporate Source/Institution: BOSTON UNIVERSITY (0017)

Chairperson: ALLEN MICHEL

Source: VOLUME 52/01-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 253. 182 PAGES

Descriptors: ECONOMICS, FINANCE

Descriptor Codes: 0508

Part I. The poison pill is a shareholder's right to purchase additional shares of either the target or the acquirer's company at a very attractive price as a result of a hostile tender offer for the target firm's shares or the accumulation over a pre-determined percentage of outstanding shares. These shareholder's rights impose significant damage to an acquirer's assets by excluding the acquirer when actually triggered. Since the Delaware Supreme Court ruled that poison pills do not require majority approval of voting shareholders in 1985, the majority of large U.S. firms have issued poison pills to defend hostile takeovers, but there has been an argument whether it augments shareholders' wealth. This study provides empirical evidence to help to understand the poison pill properly.

Part II. U.S. firms diversified to hedge their risks from the volatile economy in the 1960s and 1970s, and in the 1980s, seemed to accelerate their efforts to diversify through mergers and acquisitions. However, there have been conflicting expectations regarding the value of diversification. In this section, the relationship between financial performance and the degree of relatedness of a firm's business segments is examined using market and accounting measurements of a firm's performance.

Part III. The Cumulative Average Residual (CAR) Method has been one of the most popular methodologies to measure market performance of an individual stock or portfolio. The key assumption of this method is that the systematic risk incorporated in the CAPM remains constant even after new information is released. However, if the firm's capital structure is changed due to the new information, the systematic risk must shift to reflect the new capital structure. The method of intervention analysis overcomes this weakness by separating the change in the systematic risk from the newly announced event. This study presents an empirical comparison between those methods by examining effects of acquisitions on shareholders' wealth.

**A COMMON VALUE AUCTION MODEL ALLOWING ASYMMETRICALLY INFORMED BIDDERS, RISK
AVERSE BIDDERS, AND A COMPARISON OF SEQUENTIAL VERSUS SIMULTANEOUS
AUCTIONS FOR MULTIPLE OBJECTS (APPLIED GAME THEORY, INFORMATION
ECONOMICS)**

Author: HAUSCH, DONALD BRUCE

Degree: PH.D.

Year: 1985

Corporate Source/Institution: NORTHWESTERN UNIVERSITY (0163)

Source: VOLUME 46/08-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 2399. 151 PAGES

Descriptors: ECONOMICS, THEORY

Descriptor Codes: 0511

This dissertation studies auctions where all the bidders can realize the same value from the object being sold. Typically the object's value is unknown prior to the sale but each bidder has a private estimate of its value. This setting is termed the common value setting and might be the appropriate model for, say, the federal government's resource rights auctions. The model developed is informationally very simple--each bidder receives either a "high" or "low" signal, the likelihood of either being conditional on the true value of the object. The model's simplicity permits three extensions to the usual common value auction analysis.

First, asymmetrically informed bidders are permitted. Symmetric information does not mean all the players have identical information but rather that they all draw their private signals from the same distribution. Asymmetric information allows one player to simply have "better" information or a different form of signal. In this setting the players' equilibrium bidding strategies and the resulting seller's expected revenues are determined for various auction forms. These results are then contrasted with results from the symmetric model.

Second, risk aversion is introduced into the common value auction. It is shown that as bidders' risk aversion increases the second-price auction does progressively better for the seller than the first-price auction. Also, the all-pay auction, which performs well for the seller when the bidders are risk neutral, does poorly as risk aversion increases.

Third, it is possible to compare the seller's expected revenue from selling multiple objects through sequential versus simultaneous auctions. An important auction information release theorem says the seller can raise expected revenue by having a policy of publicly revealing all available information. In light of this result, it might appear that the seller would prefer to sell the objects sequentially with bid announcements since those announcements would likely be information release. However, the players, knowing this, may have an incentive to underbid to deceive their opponents. This deception effect may override the information release effect leading the seller to prefer simultaneous sales.

NOW JOINING THE NORTH AND SOUTH: A HISTORY OF THE MASON AND DIXON LINES' MARKETING AND OPERATIONS MANAGEMENT, 1932-1982 (MOTOR CARRIER INDUSTRY, BUSINESS HISTORY)

Author: HOLLINGSHEAD, CRAIG ALLEN

Degree: D.B.A.

Year: 1985

Corporate Source/Institution: THE UNIVERSITY OF TENNESSEE (0226)

Source: VOLUME 46/03-A OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 815. 320 PAGES

Descriptors: TRANSPORTATION

Descriptor Codes: 0709

This is the corporate history of a motor truck common carrier, The Mason and Dixon Lines, Inc. It chronologically presents management milestones in the company's development; acquisitions, diversifications, changes in target markets, and corporate reorganizations. The focus is primarily on the firm's development in the areas of marketing and operations management. The objectives of this dissertation are to (1) report what events occurred: to document history, (2) relate how the firm acted and reacted to **events** : as a guide for **present** and future managers, and (3) seek an explanation as to why particular management actions were taken in order to put the first two elements into perspective.

This paper was based upon historical exploratory research conducted through review of secondary sources, company materials, and a

series of twenty-five interviews with Mason Dixon employees, and industry observers.

Mason Dixon was established in 1932 for the purpose of providing motor transport of products from Upper East Tennessee to markets in New York. In the succeeding fifty years that single route had been expanded into an operation that offered service to all points in the continental United States. During that period the company passed numerous management milestones; significant among these are (1) a program to generate backhaul traffic in the early 1930s, (2) recruitment of the best management talent to supervise new activities, (3) E. Ward King's purchase of the total proprietorship rights in 1939, (4) the post-World War II program of terminal construction and fleet modernization to serve as a basis for penetration of the New York-Atlanta freight market, and (5) efforts to increase operating revenues in the 1960s and 1970s through a program of territorial expansion.

This dissertation provides an historical perspective on the issues of regulation, competition, marketing, and operations management. To the extent that a truck line manager can recognize similarities between the reported past and his present circumstances, this dissertation may be employed to reduce uncertainty about the future and make a positive contribution to motor carrier management effectiveness.

Sport TV comprou o Mundial

Portugal: Sport TV acquires World Cup rights

Diario de Noticias (DON) 25 Apr 2002

Language: PORTUGUESE

The Portuguese cable channel Sport TV has closed a deal with the German media group Kirch to broadcast the matches of the Football World Cup 2002. The company was unable to disclose the amounts involved, but it is believed that these are far from Kirch's initial demands which pointed to EUR 35mn. According to Portuguese law, Sport TV must negotiate part of this package with open TV channels to broadcast the matches of public interest, which include the ones of the national team, the semi-finals and the final. In this sense **Sports** TV, which **currently** has 375,000 subscribers, is to start negotiations with RTP, SIC and TVI selling the matches to the highest bid. *

Yahoo! Espana busca anunciantes para Fifa.com
Spain: Yahoo! to advertise 2002 World Cup sponsors
La Gaceta de los Negocios (ZDA) 12 Dec 2001 Online
Language: SPANISH

In the week beginning 17 December 2001, Yahoo! Espana is to market advertising on the Fifa.com website. The search engine will start with the companies sponsoring the 2002 Korea-Japan Football World Cup; Budweisser, Adidas, Gillette, Fuji Xerox, Philips, JVC, Avaya, Toshiba, Hyundai, Fuji Film, Mc Donalds and KT NTT. Mastercard and Coca Cola have reached a general agreement with Yahoo! to advertise in all countries worldwide. Yahoo! Espana's second phase will be aimed at some 50 more companies which, although not directly sponsoring the event, would be keen to link their brand to one of the biggest sports audience pullers in the world. Yahoo forecasts that by the end of the championship some 5,000mn web pages will have been viewed, around 80% of them **during** the actual **event**. FIFA and Japanese advertising agency Dentsu have signed an agreement putting Dentsu in charge of selling sporting sponsorship rights for the 2006 Germany Football World Cup. The agency will exclusively sell these rights to official sponsors under the name of FIFA Marketing AG in Japan as well as in Southeast Asia and Oceania. Every month around 210mn users around the world benefit from Yahoo! information, communication and e-commerce services.*

SINGAPORE/ASIA: ZOOMSPORTS.COM TO EXPAND

Business Times (XBA) 31 Jul 2000 BIZIT p.12

Language: ENGLISH

Zoomsports.com, a Singapore-based Internet sports company, plans to launch sports websites in the Thai and Indonesian languages in two months. It is currently forming joint ventures in Thailand and Indonesia. Zoomsports.com **currently** operates 10 websites in **sports** such as Formula One racing, cricket and soccer, in English and Chinese languages. It also operates offices in Malaysia and India. Its Malaysian office focuses on producing sports news while the Indian office centres on cricket. In Australia, Zoomsports.com is in the midst of acquiring a company that owns exclusive rights for five years to 15 former international rugby stars such as Colin Mead and Grant Fox. The acquisition will enable the rugby stars to write articles on rugby exclusively for Zoomsports.com. Zoomsports.com aims to break even by end-2001. For the fiscal year ending June 2001, it hopes to generate S\$ 2.6 mn in revenue.

Il management Stream gioca la carta di riserva

ITALY: EMERGENCY PLAN FOR STREAM

Il Sole 24 Ore (ISO) 11 Feb 1999 p.33

Language: ITALIAN

If the group News Corporation (owned by Mr. Murdoch) decides not to acquire the main quota in the Italian digital platform Stream, the board of the pay TV operator could decide to carry out a management buy-out. A group of international partners expectedly formed by the Spanish telecoms operator Telefonica, the US companies Direct TV and AT&T, and Viacom, would acquire stakes in the company. Telecom Italia would maintain a stake close to 30% in Stream. Another candidate to take part in the platform would be the Italian group Mediaset, which is currently closer to the Italian digital platform in hands of Tele+ but it could decide to change plans (and platform) in May 1999. Stream could launch an offer to acquire 60% of the pay TV rights to broadcast **matches** of the Italian football league **during** a six-year period, which could amount to L 2,500bn.

TV quiz you play at home
UK - INTERACTIVE NETWORK IN TV QUIZ PLAN
Daily Telegraph (DT) 19 April 1993 p32

Interactive Network of London has **acquired** European **rights** to an **interactive** television system which is popular in California and which it intends to launch before the end of 1993 in the UK. Viewers will be able with a small hand held console and an electronic control box to play TV game shows at home. 'Data jockeys' at Interactive Network's studios would for a quiz show like 'Blockbusters' on ITV transmit the multiple choose

questions of the studio contestants to the control boxes. The control boxes would then pass it on to the hand held console.

IOC, meeting in Vienna on Oct 21, approves new eligibility code which gives athlete adequate time for training and payment for that time pending approval by athlete's natl fed. Also approves right of an athlete to carry advertising material on his clothing in certain events permitted by his natl fed provided all payment goes to fed. Athlete will not, however, be permitted to carry advertising material in Olympic competition. IOC also announces that Los Angeles, Calif, will precede Moscow in its presentation on bidding for right to host '80 Summer Olympics. IOC pres Lord Killanin, addressing meeting, warns that most important matters up for decision on full agenda are choice for site of '80 Olympic Games and eligibility of athletes. Scores deterioration of long-term Olympic program because of chauvinism, nationalism and specter of pol

exploitation. Illus (M).)

Synthelabo, Monsato unit alter deal

US: SYNTHELABO EXTENDS LOREX OPTION PERIOD
Wall Street Journal Europe (WSJ) 27 May 1998 p.3
Language: ENGLISH

The French pharmaceutical company, Synthelabo, has negotiated an extension to the period in which it has the option to take full control of Lorex Pharmaceuticals, its US based joint venture with Monsanto's drug division, G.D. Searle. Lorex holds the US **marketing rights** to the best- **selling** sleeping pill, known as Stilnox in Europe and Ambien in the US, developed by Synthelabo. Synthelabo has said that it wants extra time to concentrate on a European expansion plan, including a significant takeover. It then plans to exercise the Lorex option after strengthening its European position. The new deal gives Synthelabo until April 2002 to take up the option and the eventual price will be based on the sales during the year up to the purchase. Analysts **estimate** the **price** will be around US\$ 450mn.

Abstract (Basic): US 20020023017 A1

NOVELTY - A sales server receives a predetermined product purchase request and purchaser issued product redemption status statement from a purchaser terminal and supplies the product to the purchaser, based on the received request after redeeming issued product from the purchaser.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Sales management server;
- (b) Reservation management server;
- (c) Product purchase terminal;
- (d) Product selling method;
- (e) Recorded medium storing sales management program;
- (f) Sales server

USE - For managing sale of flight ticket, movie ticket, **sports event** ticket using **Internet**. Also applicable for hotel reservation using Internet.

ADVANTAGE - Management efficiency of the product sale is improved, since a vendor can easily redeem a **product** from a **purchaser**. A predetermined **privilege** is obtained by a **purchaser** by exchanging a **product** for an equivalent replacement product.

DESCRIPTION OF DRAWING(S) - The figure shows an explanatory view of the sales management system.

MERCHANDISE SALES SUPPORT SYSTEM

PUB. NO.: 2002-342436 [JP 2002342436 A]
PUBLISHED: November 29, 2002 (20021129)
INVENTOR(s): MORITA MASAE
HIROKAWA TOMOHISA
APPLICANT(s): NTT ME CORP
APPL. NO.: 2001-145468 [JP 20011145468]
FILED: May 15, 2001 (20010515)
INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To provide a merchandise sales support system by which expenses required in the case of delivering advertisement offline are reduced, the customer interest is stimulated by publishing authentication information for obtaining a **privilege** when the user **purchases merchandise** within the **advertisement** and the safety of the user can be confirmed from advertisement utilization or purchasing behavior **simultaneously**.

SOLUTION: An **automatic** password generation part 12 updates the authentication information set corresponding to each merchandise dealer with a previously set timing. In this case, authentication information is information for obtaining the **privilege** when the user **purchases merchandise**. Then, when a communication terminal 70 is operated to transmit information on one merchandise dealer to the merchandise sales supporting system 10, a picture management part 13 **presents** the authentication information and advertisement of the one merchandise dealer to the terminal 70. Thus, the user can obtain the authentication information of the merchandise dealer designated by him/herself.

ABSTRACT

PROBLEM TO BE SOLVED: To provide an advertising effect in a form not interfering with a primary image by using a communication means such as the Internet.

SOLUTION: An advertisement agency business 104 releases a partial image 105 including a replaceable object 103 included in the image 102 produced by an image production 101 and the object 103 on the Internet 106. An **advertiser** 108 **presents** a price for **buying** the **rights** to change the object 103 to the advertisement agency business 104. The advertisement agency business

104 determines the advertiser 108 and it sends replacement object data prepared by the image production 101 or the like to a terminal 109. The replacement object data is overlapped and projected on the image 102 at the terminal 109.

INTL CLASS: G06F-017/60

ABSTRACT

PROBLEM TO BE SOLVED: To eliminate or reduce the risk of the excess or shortage of a product generated by a difference between the number of orders for purchase and the number of the actual transaction based on the estimated demand by a product purchaser who repeatedly purchase the product, and to **simultaneously** prevent the waste of resources and the loss of the sales chances.

SOLUTION: The difference between the number of orders for purchase and the number of the actual transaction based on the estimated demand by a product purchaser who repeatedly purchase the product is defined as the **product swapping right** for **selling** and **buying**, the **product swapping right** for **selling** and **buying** of a plurality of **product** purchasers are reserved by using a computer. For the agreed product swapping rights, the number of the actual transactions is outputted as the number of the shipped **products**. For the disagreed **product** swapping **rights**, the number of the **purchase** orders is outputted as the number of the shipped products.

Abstract (Basic): JP 2003157476 A

NOVELTY - The bar code information of specific goods (38) purchased by a user (Us) at shop (30), is input into a sales-promotion apparatus (36). The user identification, purchase time and position of the shop, are transmitted to a server (22) as sales promotion information along with the bar code. The trend of the specified goods is analyzed from the sales promotion information and privilege is implemented on the goods accordingly.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) goods sales promotion device; and

(2) goods sales promotion system.

USE - For analyzing sales with respect to specific goods such as drink, confectionery, cigarette in specific shops such as general stores, supermarket for installation of **automatic** vending machine for the specified goods at location near the shops.

ADVANTAGE - Enables **automatic** transmission of goods information from goods sales location without applying burden on users or the shop. The trend of goods can be grasped easily and reliably.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic view indicating the goods sales promotion. (Drawing includes non- English language text).

Abstract (Basic): JP 2002352311 A

NOVELTY - An evaluation unit (114) judges whether the privilege providing conditions are satisfied, based on the user data (122). A judging unit (112) judges whether any of the player met the reference standard, based on the evaluation result. A controller controls the predetermined privilege providing apparatus (100), based on the judgment result.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Privilege providing program; and
- (2) Recording medium storing the privilege providing program.

USE - For providing privilege with respect to goods in **automatic** vending machine.

ADVANTAGE - Improves the **purchaser's purchasing** volition. The **privilege** with respect to the **goods** is provided reliably.

DESCRIPTION OF DRAWING(S) - The figure shows the functional block diagram of the privilege providing apparatus. (Drawing includes non-English language text).

Privilege providing apparatus (100)

Judging unit (112)

Evaluation unit (114)

Abstract (Basic): JP 2003016332 A

NOVELTY - The goods identification data and the data regarding a facility that provides **privilege** corresponding to the **goods purchased** is received. The JAVA applet for acquiring coupon data corresponding to the received privilege is selected. The selected JAVA applet is setup based on the identification data and is transmitted to the user's personal digital assistant.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) coupon data service system; and

(2) coupon data provision program.

USE - For providing coupon data **during** goods purchase.

ADVANTAGE - The **privilege** corresponding to the **acquired goods** /service is obtained easily and efficiently using mobile phone, thereby promoting the sales/service of the goods.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the coupon data provision system. (Drawing includes non-English language text).

KR 2002012326	A		1	G06F-017/60	

Abstract (Basic): KR 2002012326 A

NOVELTY - An auction marketplace system of an Internet banner advertisement by an Internet auctioning method is provided to construct an auction marketplace system mediating system capable of progressing a banner advertising transaction of a medium company and an advertiser in **real time**.

DETAILED DESCRIPTION - A medium company and an advertiser connect to an auction system server(S100) and perform member registering processes(S101). The medium company which is registered as a member may perform an auction application of a special space in one's homepage of an auction marketplace(S102). The advertiser selects a commodity satisfied with one's necessary condition of an advertisement out of selling articles registered in the auction marketplace and suggests a bidding price and performs an auction bidding process(S103). The above information is stored in a **bid** information DB, and an **advertising right** is given to a bidder who suggested the highest price **during** an auction period(S105). If a successful bid is decided, an advertisement contract is progressed between the medium company and the advertiser, and the medium company ones inserts an advertisement code(Ad Tag)(S202) of the advertiser in an advertisement space for registering a banner in one's homepage, and a banner change is **automatically** processed by an advertisement server from now on. An advertisement is executed and an advertisement result is supplied to the medium company and the advertiser.

Abstract (Basic): WO 200219057 A2

NOVELTY - Method consists in consolidating transaction data received from suppliers on a network-enabled portal at a consolidation payment service, receiving payment information and **presenting** a single transaction history to the user. A digital payment **right** policy associated with a **product purchased** from the supplier is accessed to determine payment to an author, singer or owner. The transaction is authorized using biometric data stored in a transaction device and the user remains anonymous.

DETAILED DESCRIPTION - There are INDEPENDENT CLAIMS for (1) a transaction apparatus, (2) a payment consolidation computer program.

USE - Method is for re-using financial information to process billing information and pay bills from multiple networked suppliers.

DESCRIPTION OF DRAWING(S) - The figure shows a transaction information consolidation system.

AU 200123174	A	41	G06F-017/60	

Abstract (Basic): AU 200123174 A

NOVELTY - A vendor (108) receives a payment token for exchange of **goods** and services and provides a **rights** token to the **purchaser** (102). The **rights** token is programmed on a smart card (106) by purchaser PC (104). The purchaser inserts the smart card into a smart card reader (120) and selects a rights token to be **presented** to a purveyor (118). The purveyor provides goods (122) and services corresponding to the selected rights token.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Online token based sale and purchasing method;
- (b) A programmable smart card;
- (c) Recorded medium storing token based sale and purchase program

USE - For token based transaction of goods and services such as airline ticket, taxi voucher, a hotel room and meals through Internet, intranet.

ADVANTAGE - Provides the purchaser with flexibility to alter an order when taking delivery of the purchased goods. The purchaser is able to obtain a refund from vendor for the unused rights token.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of online token based transaction system.

JP 2001325423	A		5	G06F-017/60	

Abstract (Basic): US 20010044752 A1

NOVELTY - A supplier terminal charges a commission fee from a user, upon receiving an application for purchasing a product from a user terminal through Internet. The supplier terminal randomly selects the product price within a predetermined price range, and **presents** the selected prize on the user terminal together with a predetermined term of validity.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Product sales method;
 - (b) Storage medium storing selling product program
- USE - For selling products through Internet.

ADVANTAGE - The speculative purchasing can be realized, by extending the term of validity for products whose prices unsteadily fluctuate. The user can **acquire** and resell the **privilege** to **purchase** the **product** at the **presented** price if the privilege is no longer attractive to them. A selling price of a single product provided by a single supplier is included in a predetermined price range. As a result, a comparison between the selling prices from different suppliers becomes difficult, thereby preventing overheating price competition between the suppliers.

DESCRIPTION OF DRAWING(S) - The figure shows the flow chart illustrating an operation of the sales system using Internet.

Abstract (Basic): JP 2001160089 A

NOVELTY - A judging unit judges the frequent purchase of **goods** by the customer and accordingly **privilege** objective **goods** are identified. The **purchase** of **goods** within fixed period is recognized based on frequent purchase judgment. A privilege providing unit provides privilege to customer based on the time period. Purchaser's performance information is updated based on frequency data and privilege goods data.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for information reference terminal.

USE - For point of sales system in supermarkets, stores.

ADVANTAGE - Enables providing privilege to customer smoothly and **automatically** depending on purchase time interval, thereby facilitates recognition of successive privileges.

DESCRIPTION OF DRAWING(S) - The figure shows the system block diagram of goods selling data registration device. (Drawing includes non-English language text).

AU 200053072 A G06F-017/60 Based on patent WO 200073964

Abstract (Basic): WO 200073964 A2

NOVELTY - A server (10) connected to host electronically stores and organizes data selected from licensor, manufacturer and retailer database. The server generates a web site accessible by customer, and retrieves and transmits portions of selected data to customers, for facilitating transaction of business between customers, licensors, manufacturers and retailers.

DETAILED DESCRIPTION - The licensors database stores the licensors information descriptive of **rights** associated with **product** available for **purchase** by customer. The manufacturer and retailer information descriptive of manufactured products and products available for purchase by customer, are stored in respective databases. The three data bases are connected in communication with the host. The server **automatically** updates the databases, based on customer transactions. INDEPENDENT CLAIMS are also included for the following:

- (a) system for electronic exchange of information between licensors, manufacturers and retailers;
- (b) system for inciting user interaction with host in internet;
- (c) method for inciting user interaction with host in internet;
- (d) method for customizing display of products **presented** to user of remote computer;
- (e) system for customizing display of products **presented** to user for remote computer;
- (f) method for providing popularity ranking of brand to user of remote computer;
- (g) method for **dynamic** collection of web site stores and products sold within the web site stores to user of remote computer;
- (h) system for providing popularity ranking of brand to user of remote computer;
- (i) program for computing popularity ranking of brand

USE - Electrical shopping system in internet for providing business to business (B-to-B) interface to licensors/brand holders, licensees/manufacturers, retailers and other third parties for monitoring trends in popular culture and obtaining up-to-date popularity rankings of brands related to sports, music movies, television, lifestyle, gaming, etc and critical popularity information related to news reports, stories and advertisements trend and historical information through a **real time**, user generated trend watching hot list, particularly for business such as individuals, start ups and small business that do not have wide access to critical business data, contacts or market places.

ADVANTAGE - Allows customer to search for specific items or browse through particular category of items in the web site stores through search or browse area of web page, reliably. Caters the display of the systems web site, based on the user profile and preferences reliably. The users interaction with the system is encouraged by offering discount points that can be redeemed at the web site stores.

DESCRIPTION OF DRAWING(S) - The figure shows schematic block diagram of electronic shopping system.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
JP 9223274	A		16	G07G-001/12	

Abstract (Basic): JP 9223274 A

The POS terminal (4A-1-4A-n, 4B-1-4B-n) has a goods registration circuit to which the list of goods is stored. A privilege goods decision circuit classifies the goods as general goods or privilege goods. The total sales for general goods are stored in a sales memory.

When the goods are judged as goods for privilege, the total sales of privilege goods is stored in the memory of an IC card of a user.

A privilege existence decision circuit determines whether sales value of **purchased privilege goods** reaches a predetermined wholesale amount. A subtractor **automatically** deducts the amount corresponding to special discount from the total sales of the privilege goods if discount condition is satisfied.

ADVANTAGE - Work of cashier or salesclerk associated with e.g. discount condition fulfillment is eliminated.

GAME ABILITY QUALIFICATION SYSTEM FOR GO AND SHOGI GAME, GAME PRICE SETTING AND SELLING SYSTEM, AND GAME ABILITY JUDGMENT SYSTEM BY GAME

PUB. NO.: 2002-078843 [JP 2002078843 A]
PUBLISHED: March 19, 2002 (20020319)
INVENTOR(s): OKADA MASATSUGU
APPLICANT(s): OKADA MASATSUGU
APPL. NO.: 2000-399336 [JP 2000399336]
FILED: November 24, 2000 (20001124)
PRIORITY: 2000-236247 [JP 2000236247], JP (Japan), June 30, 2000
(20000630)
INTL CLASS: A63F-003/02

ABSTRACT

PROBLEM TO BE SOLVED: To provide a system for **automatically** judging a game ability for go and shogi games.

SOLUTION: This system comprises a game developer terminal 10 such as personal computer, mobile or the like, a game ability qualification game participant terminal 20, and a game ability qualification device 200 having a game product orderer terminal and a game ability qualification desirer terminal (game opponent terminal) connected thereto through a network 100 such as the **Internet** or the like, a **game** price setting and selling device, and a game ability judgment device. With respect to a game proposed from the game developer terminal 10, an unspecified number of game ability qualification game **participants** having **rank** and class certifications execute qualification games by use of their own terminals 20 and transmit the qualification game results to the game ability qualification device 200. The game qualification judgment device judges the game ability of the game opponent on the basis of the game result for the game qualified in game ability, and outputs and displays the judged game ability to the game opponent terminal.

NOVELTY - A processor allows acquisition of a special item associated with the item acquisition information stored in a ROM (14) while executing a game program, when the result of **comparison** and checking of **player** specific data and decoded player specific data satisfies a predetermined relationship.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) user access enabling method. and

(2) user access enabling system.

USE - Video game system.

ADVANTAGE - The **game** system increases **game** playing **Internet** by allowing the players to acquire item or to select a game play parameter that cannot be acquired or selected **during** the normal course of playing a primary game.

DESCRIPTION OF DRAWING(S) - The figure shows a perspective view of the video game system.

Abstract (Basic): US 20020119824 A1

NOVELTY - The amusement game machines (10,12,14,16) provided at several sites, communicate mutually through the Internet (28). The web servers (20,22,24) connected with the game machines, locate and

communicate with the **game** machines through the **Internet** .

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

- (1) Tournament conducting method; and
- (2) Network for conducting tournament.

USE - For conducting tournament over **Internet** for playing amusement **games** like puzzle game, sports, race games, etc.

ADVANTAGE - Since several **game** machines communicate through the **Internet** , the number of competitors are increased and enables to conduct a variety of competitions. The **players** receive updated scores and **ranking** in the tournament in **real - time** and enables identification of the top players of different regions to allow them to play in state wide or nation wide tournaments.

DESCRIPTION OF DRAWING(S) - The figure shows a block diagram of the tournament conducting network.

Abstract (Basic): KR 2001025648 A

NOVELTY - The **Internet** advertisement using a bingo **game** of a puzzle type is provided to supply a distinctive advertisement different from a banner advertisement by exposing an advertisement or an Internet address to netizens while solving a bingo game.

DETAILED DESCRIPTION - An advertisement request company's server and home page transmit information on a company or a bingo **game** and output pictures and an **Internet** address to a **web** browser. A bingo **game** server supplies a right to participate in a bingo game to members and connects a bingo game processing through a PC and a home page. A bingo **game** home page includes an **Internet web** site, an inputting unit, and other information. A member DB saves a **present** state related to members. A rank managing DB saves **rankings** of bingo game **participants** and uses **rankings** as a basic data for giving a prize. A PC receives information on a bingo game from a home page of an advertisement request server of a bingo game.

Abstract (Basic): US 20020010697 A1

NOVELTY - Reporters gather the sports information and enter information through global computer network into a database. Media partner e.g. radio and television broadcaster, newspaper publisher, etc., are allowed to access database that is organized on geographic or dominant market area basis for retrieving specific sports information. Menu of information categories is **presented** to users through network, based on the retrieved information.

USE - For entry and retrieval of available information on scholastic and league amateur sports, team **players**, game schedules, **team** and **player ranking**, historical data, directions to game sites, and even **current** weather condition at location of any particular **game**, using **Internet**.

ADVANTAGE - Unsurpassed, timely coverage of local sports events are provided, thereby making the sports information readily available from any location having Internet access.

DESCRIPTION OF DRAWING(S) - The figure shows a **web** page layout of on-line **sports** information entry and retrieval system.

Abstract (Basic): KR 2001044475 A

NOVELTY - An internet web system for a **real - time** stock investment game is provided to promote the motive for participating in the stock investment game by enabling participants to save up a prize day by day and to get an acquired dividend even though the participants lose the game.

DETAILED DESCRIPTION - A stock investment **game** is held through the **internet**. Participants are invited at all times. The number of participation days for the participants is respectively set on the basis of a participation day. Thirty million won of cyber money is paid to the each participant. A cyber trading of dealing in stocks is started through the internet. An earning rate is estimated day by day. A prize is provided to each participant. The prize is provided to only **participants** who appear a plus earning **rate**. An order of the dividend is increased or decreased according to the number of the participants.

JP 2001229305 A 8 G06F-017/60

Abstract (Basic): JP 2001229305 A

NOVELTY - Game participation right is granted to higher order bid-price players, based on prices quoted for goods by several players. The players with game participation right are made to participate in scratch-card game and the **players** are **ranked** accordingly. The higher order bid-price **player** with highest **ranking** is authorized as a successful goods tenderer.

USE - Auction **game** system using **internet**.

ADVANTAGE - The system provides an enjoyable experience **during** an auction and ensures fairplay by preventing successful minimum bids.

DESCRIPTION OF DRAWING(S) - The figure shows the flow chart explaining network auction. (Drawing includes non-English language text).

--------------	---	--	--	-------------	------------------------------

Abstract (Basic): US 6036601 A

NOVELTY - Default images of games are replaced by alternative textures having advertisements implemented within them. An advertising server coordinates the matching of ads to demographic data of the game player, and accommodates the advertisements in formats from game information provided by game sources.

DETAILED DESCRIPTION - A game player is visually influenced by advertisements as they view the virtual world of the game, as plug-in software replaces the default images of the game with virtual pictures and figures using the advertisement. View statistics are retrieved from the game **player**'s computer or console to **rate** viewing effectiveness for advert placement confirmation and billing purposes.

USE - Advertising within virtual environments of computer games.

ADVANTAGE - Provides non- **interactive** method of advertising within **game** screen environments of the **Internet**, which does not interrupt the **game** player, yet exposes the user to advertising.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram of the relationship between each server and flow path of data sent or collected as an advertisement is implemented, and player logs on over a network.

Abstract (Basic): EP 947966 A2

NOVELTY - Players select an integer N and a rank R for that integer **during** a series of game play intervals. These selections are collated in a computer tallying database; associated with each is a unique personal identifier for each player.

DETAILED DESCRIPTION - The players selections are tabulated and the most frequently selected rank R and integer N is found. The game winner is then determined by **comparing** each **player** 's selection of N and R with the most frequently selected R and N. A prize is awarded to the winner. An INDEPENDENT CLAIM is included for the method of gameplay.

USE - For **interactive** lottery game over the **internet**.

ADVANTAGE - The game allows the players to determine on aggregate the outcome of the game and the winner or winners i.e. it is not totally random.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 5851011	A	17	A63F-001/00	

Abstract (Basic): US 5851011 A

The method involves forming a player hand (90) by dealing five playing cards from a game deck. A bust is indicated in player hand, if two or more cards of same suit and rank are **present** in it. If bust is identified, player hand loss is declared. If bust is not identified, then seven playing cards are extracted from game deck to form dealer hand (80). Five cards are selected from dealer hand to form best possible dealer poker hand which does not contain two matching cards of same suit and rank.

If two or more cards of same suit and rank are **present**, a bust is indicated in best possible dealer poker hand. Then, player hand is declared won if bust is contained in dealer poker hand. If bust is not contained in either player hand or dealer poker hand, player hand is declared won if it contains higher **ranking** poker hand. **Player** hand loss is declared if dealer poker hand contains higher ranking poker hand and push is declared if both of them contain higher ranking poker hand.

USE - For e.g. draw poker and stud poker.

ADVANTAGE - Improves interest of public in game. Offers video based casino **games** over **internet**, thereby making **games** available to potentially enormous audience.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 5537143	A	26	H04N-007/10	CIP of application US 92930822

Abstract (Basic): US 5537143 A

The **interactive** television system includes a number of telephone circuits terminating at a local telephone exchange (LTE). Each

telephone circuit is coupled to a dual-tone multifrequency (DTMF) receiver which has a digital character output and a steering logic signal (Std). Each participant accesses a DTMF receiver via a telephone with a DTMF keypad. Connection is achieved by dialling the appropriate number on the DTMF keypad.

A computer system controls the **televised** programme **event** according to the participants' DTMF key entries. A microprocessor connected to each DTMF receiver temporarily stores the digital character outputs which are then read into a main memory.

ADVANTAGE - Allows fast data transfer allowing players to participate in time based games, e.g. involving race against clock.

Participants only pays local call **rates** and does not require specialised equipment.
